VITIROVER ROBOT MOWER

Get rid of Glyphosate, Plowing and Massive Tractors !

VITIROVER Professional Robot Mower

A very effective and ecological solution to maintain vegetation without damaging soils nor trees.

Vitirover mows unwanted vegetation within designated plots. It goes very gently, in contact with obstacles such as trees, stakes or pilars, to cut unwanted vegetation as close to them as possible.

Green and autonomous

VITIROVER produces its own solar energy. It is autonomous and does not consume any fossil fuels.

No more chemical weeding

VITIROVER preserves the environment by providing precise weed control without the use of chemical weedkillers or tillage.

Respect the soil

VITIROVER respects the soil thanks to its light weight, avoiding compaction caused by large tractors.

Zero damage

VITIROVER cannot damage or destroy plants or industrial installation supports. It smoothly get close to obstacles (trees, vines or pilars) at a very low speed.

EDUCATION

Coming from Vineyards, one of the toughest agricultural environment to maintain because of the density of obstacles, VITIROVER robots have adapted to many other environment.

AUTONOMOUS

CHARGING DOCK STATION

The solar panel mounted on top of VITIROVER allows the robot to work up to 6 hours a day, depending on the sunshine.

For the robot to work daily and permanently, the VITIROVER Charging Dock Station can be installed on any agricultural or industrial plot.

WEB REMOTE DASHBOARD

The Viti-Cloud web-based dashboard allows the robots' shepherds (robots fleet managers) to monitor, maintain, manage and even remotely drive robots. The dashboard will provide live technical information such as battery level, motor consumption, mowing efficiency, plot coverage, etc. It will also publish detailed data reports. The robots shepherd will be able to take over robots thanks to a remote and live transmission from the cameras.
